

Remuneration Structure Model

Develop and manage Remuneration Structures using JE Leader and MHR RemData

Introduction

To develop a Remuneration Structure, job evaluation results need to be linked to the External Market.

The Remuneration Structure Report within the MHR RemData service provides a simple means of establishing this link.

Users can select:

- A specific market comparison
 - All organisations
 - Asset group
 - Industry
 - Turnover Group
 - Staff numbers
 - Location
- A specific market stance
 - Median
 - Upper Quartile
 - Lower Quartile
- Number of Bands

The Remuneration Structure Report automatically generates a draft structure based on user selections. This can then be refined by the user to create the final structure.

Leading Edge Services

The Remuneration Structure Report brings together two leading edge services from MHR Global:

JE Leader Online is one of the most cost effective job evaluation systems available.

JE Leader is an online job evaluation tool that allows employers to determine their organisation's hierarchy of jobs quickly and efficiently.

Being available over the internet, users have the freedom to personally control project timescales by activating the system as and when needed.

Evaluations can be carried out at any site with an internet connection.

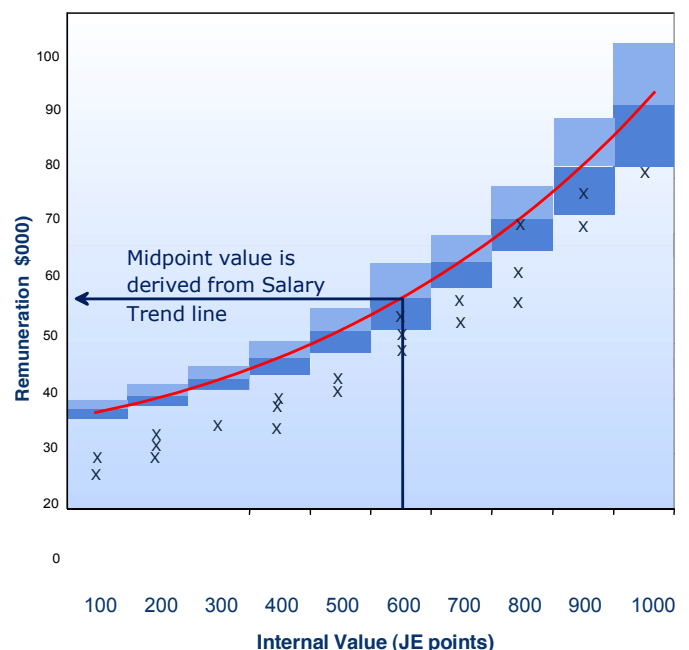

Evaluation results can be linked to Market data available in the MHR RemData service to provide an efficient means of creating and managing remuneration structures.

MHR RemData has

- Simple to use online data collection and reporting
- Short, one month turn-around between data collection and reporting
- Job Description-based survey:
 - Very easy to identify suitable benchmark roles

Results can be linked with internal relativities generated using *JE Leader Online* to provide a foundation for remuneration structures.

Job Evaluation-based Structure

MHR RemData and Remuneration Structures

The Remuneration Structure Report within MHR RemData helps create these structures cost effectively and easily.

The report uses standardised internal values collected and analysed over many years of providing job evaluation services globally.

Users can select the market segment which best meets the needs of the organisation:

- All organisations (i.e. National data)
- Asset
- Annual Turnover
- Industry
- Staff numbers

The user can create the Band structures, by defining:

- Number of bands
- JE Points spread for each band
- Range around midpoint value for each band

The draft structure is created automatically by the MHR RemData system.

The final structure can also be saved within the MHR RemData system, for later retrieval and further update.

Refining and updating the structure

The draft structure can be further refined by the user as needed.

Remuneration Structure									
Organisation:		ABC Corporation							
Market:		All organisations							
Survey:		March 2009							
Design Name:		ABC Median All Orgs 2009							
Band	Internal Value				Remuneration Range				
	Minimum	Midpoint	Maximum	-Range	Minimum	Midpoint	Maximum	+Range	
1	100	150	200	10.0	35900	39900	43900	10.0	
2	201	250	300	10.0	41300	45900	50500	10.0
